Water Protection

PROTECT SPRINKLER HEADS WHEN TOPDRESSING, AERIFYING AND SPRAYING DYES AND PIGMENTS

How the Draingarde® system for sprinkler heads works:

SPRAYING Dyes and Pigments on Fairways:

Cover sprinklers on 6 golf holes at a time for efficiency.

The average golf course has 20 sprinkler heads per hole which would require approx. 120 Draingarde® sprinkler head covers (DG6).

TOPDRESSING AND AERIFYING on Fairways:

Cover sprinklers on 3 golf holes at a time for efficiency.

The average golf course has 20 sprinkler heads per hole which would require approx. 60 Draingarde® sprinkler head covers (DG6).

TOPDRESSING GREENS AND APPROACHES

Draingarde® recommends to cover sprinklers on 9 holes at a time for efficiency.

The average golf course has 8 sprinkler heads per golf hole on greens and approaches which would require approx. 72 Draingarde® sprinkler head covers for greens and approaches (DG4).

STEP

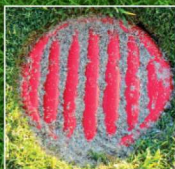

1

Place Draingarde® covers with Rim facing down over sprinkler heads BEFORE Applications begin.

STEP

2

Remove Draingarde® covers AFTER applications complete and dispose of material.
